Test Plan for opencart

Contents

1.0 INTRODUCTION	3
1.1. Objective	3
1.2. Project Description	3
1.3. Process Tailoring	3
2.0 ASSUMPTIONS/DEPENDENCIES	4
3.0 TEST REQUIREMENTS	5
4.0 TEST TOOLS	6
5.0 RESOURCE REQUIREMENTS	6
6.0 ENTRY AND EXIT CRITERIA :	6
7.0 TEST SCHEDULE	7
8.0 RISKS/MITIGATION	7
9.0 METRICS	7

1.0 Introduction

1.1. Objective

This Test Plan aims to describe the overall testing approach and activities for the OpenCart website. It defines the scope, test strategy, testing tools, requirements, and test schedule required to ensure the quality of the system.

The objective of this plan :

- a. Verify that the core functionalities work as expected
- b. Ensure the application meets the defined business and quality requirements
- c. Assess the system's readiness and stability for end-users

1.2. Project Description

OpenCart is a free, open-source e-commerce platform designed for online merchants. It provides a professional and reliable foundation for building and managing online stores, including product management, order processing, and customer transactions.

Key features include:

- a. User Registration
- b. Login / Logout
- c. Product Search
- d. Product Categories
- e. Product Details Page
- f. Add to Cart
- g. Shopping Cart
- h. Checkout Process
- i. Admin Login (basic flow)

1.3. Process Tailoring

This project follows standard software testing practices with tailoring based on OpenCart website requirements.

Testing Approach:

Manual Black-Box testing will be the primary testing method for this project and will be performed from the end users perspective without accessing the internal code .

Testing Techniques:

Positive Testing: Verify expected behavior with valid inputs

Negative Testing: Validating how the system handles invalid inputs (e.g., incorrect login credentials, out-of-stock items).

Boundary value analysis : Test limits and edge cases(min ,max ..)

Testing Types:The following types of testing will be conducted:

- a. Smoke Testing: Quick verification of core functionalities to ensure system stability before detailed testing.
- b. Functional Testing: Verify that business requirements are implemented correctly.
- c. Exploratory Testing :explore defects
- d. Usability Testing: Evaluate the user experience.
- e. UI Testing: Verify the correctness of the user interface.
- f. Compatibility Testing: Ensure compatibility across multiple browsers and screen sizes.

Test Deliverables :

- d. Test plan
- e. Test cases document
- f. Bug report document
- g. Summary report

Test Scope:

In Scope: The following core features will be tested:

- a. User Registration and Authentication (Login/Logout)
- b. Product Search functionality
- c. Product Categories navigation
- d. Product Details Page
- e. Add to Cart functionality
- f. Shopping Cart management
- g. Checkout Process
- h. Admin Panel Login

Out of Scope: The following items are excluded from testing:

- a. Third-party integrations and payment gateways
- b. Mobile application testing
- c. Advanced security and penetration testing
- d. Backend database testing
- e. API testing

2.0 Assumptions/Dependencies

Assumptions:

The following assumptions have been made for this testing effort:

- a. The OpenCart website is open-source and deployed in a test environment.

- b. The test environment is stable and available throughout the testing period.
- c. No major code changes or system updates will occur during the testing cycle.
- d. The OpenCart demo or deployed version is stable at the start of testing
- e. The local server (XAMP/WAMP) is correctly configured with the required PHP extensions (such as GD and cURL) and a MySQL database.
- f. Sufficient sample data (products, categories, and customer accounts) is available in the system to support end-to-end testing.
- g. A stable internet connection is available for web-based testing, or the local server environment is fully functional.

Dependencies:

The successful completion of testing depends on the following:

- a. Continuous access to the website URL and the Admin Panel.
- b. Availability of test data, including products, categories, and user accounts.
- c. Network and server stability during the testing period.
- d. Access to multiple web browsers for compatibility testing (Chrome, Firefox, Edge, Safari).
- e. Availability of the approved Functional Requirements Specification (FRS) document.

3.0 Test Requirements

This section specifies the requirements that must be validated during the testing process to ensure the OpenCart website meets the desired quality standards.

Functional requirements :

- a. User registration
- b. Login and Logout functionality
- c. Product search and categories
- d. Product Details Page
- e. Shopping cart
- f. Add to Wish list and Add to Cart
- g. Remove from Wish list and from Cart
- h. Admin Login
- i. Checkout Process
- j. Links and navigations

Non Functional requirements :

- a. Performance response time under normal load
- b. Cross-browser compatibility
- c. Responsiveness across different screen resolutions

- d. Basic security check for login fields (ex. password rules)

4.0 Test Tools

- a. Browsers : Chrome , Safari ,Edge,Firefox
- b. Jira for bug tracking
- c. Excel/Google sheets for test cases management
- d. Local server environment XAMP/WAMP for hosting application
- e. Screenshots and Snapshots tools for capturing defects

5.0 Resource Requirements

- a. Manual QA Tester
- b. OpenCart Installation Guide
- c. Test machine (Laptop)
- d. Local server (XAMP/WAMP)
- e. Internet connection
- f. Functional Requirements Specification (FRS) document.
- g. Web browsers (Chrome, Firefox, Edge, Safari)
- h. Access to OpenCart Admin Panel
- i. Test user accounts (Admin, Customer)
- j. Jira for Bug tracking
- k. Test Case and Bug Report templates (Excel/Google Sheets, word/Google Docs)

6.0 Entry and Exit Criteria :

Entry Criteria :

Testing can start when the following conditions are met:

- a. OpenCart website is deployed and accessible in the test environment.
- b. Test environment (local server or online) is stable and ready for testing.
- c. Required access to the Admin Panel is available.
- d. Functional requirements or testing scope is clear and approved.
- e. Test cases are prepared and reviewed.
- f. Test data is available for execution.

Exit Criteria :

Testing will be considered complete when:

- a. 100% of planned test cases are executed.
- b. All critical and high-severity defects are fixed and retested.
- c. No open blockers remain.
- d. Test results are reviewed and approved.
- b. All planned exploratory testing scenarios executed
- e. Final Test Summary Report is prepared and submitted.

7.0 Test Schedule

Phase	Activity	Description	Duration
1	Requirements analysis	Review website features and user flows Identify core functionalities to be tested	1 day
2	Test planing and Test Case Design	Prepare test plan Write detailed test cases document for each features in the scope	3 days
3	Smoke testing	Perform quick verification of core functionalities to ensure system stability	.5 day
4	Test execution	Execute functional test cases Perform exploratory testing to identify unexpected defects Verify UI consistency and usability Test across multiple browsers and screen sizes Log defects and write bug reports	2 days
7	Final Review and Test Closure	Review test results Prepare final test summary and close testing activities	.5 day

8.0 Risks/Mitigation

Risk	Mitigation	Sevierity
Unstable local server XAMP/WAMP	Verify local server setup before testing have online environment ready	High
Missing or incomplete testing data	Prepare sample data in advanced	Medium
Limited access to the Admin Panel	Ensure proper credentials and permissions	High
Network connectivity issues	Test locally if offline and schedule testing during stable network periods	Medium

9.0 Metrics

The following metrics data will be used to evaluate testing progress and quality :

- Total number of test cases
- number of executed test cases
- Number of passed / failed test cases
- Defect count by severity(Critical, High, Medium, Low)
- Defect status (Open, Fixed, Re-tested, Closed)
